Part # 706 ----- Offset upper control arm shaft

706 shafts fit the following applications:

1963-82 Corvette

1965-70 Impala, Caprice, Belair, Biscayne

The offset shaft will fit stock control arms using standard type bushings for the stock arm. This includes rubber, polyurethane, and Global West Del-a-Lum bushings.

The purpose of using an offset shaft is for obtaining a proper alignment because of one of the following reasons:

- Bent frame
- Excessively lowered or raised
- Sagging frame
- Performance Alignment
 - Drag racing
 - Road racing
 - Performance street

Generally install offset shaft so the tire will be pushed out of the fender away from the motor.

Global West will be towards the motor.

Road racing applications Global West will go towards the frame not the motor.
