TBC-11 TUBULAR REAR CONTROL ARMS SPHERICAL BEARING AND POLYURETHANE

1. Remove the lower control arms from the vehicle. A shop manual maybe helpful for assistance in this regard.
2. Your new lower control arms have a spherical bearing in one end of the arm. This end attaches to the unibody, each bearing will have 2 steel spacers located one on each side of the spherical bearing. Simply slip the arm with the spacers installed up into the body. Make sure the grease fitting on the other side of the arm is facing down towards the ground. Slide the factory bolt through and torque to 70 foot pounds.
3. Slide the other end of the arm with the polyurethane and steel sleeve into the rear end. Use the factory bolts and torque to 70 foot pounds. **NOTE:** The bushings are pre greased.
