TBC-19 TUBULAR REAR CONTROL ARMS SPHERICAL BEARING AND POLYURETHANE WITH SIDE MOUNT SWAY BAR ATTACHMENT

1. Remove the rear lower control arms from the vehicle. A shop manual maybe helpful for assistance in this regard.
2. TBC-19 lower control arms use a spherical bearing in one end of the arm. This end attaches to the frame, each bearing will have 2 steel spacers located one on each side of the spherical bearing. Note: Both arms are pre-assembled. Simply slip the arm with the spacers installed up into the frame. Make sure the grease fitting on the other side of the arm is facing down towards the ground and the bracket welded to the tube is towards the inside of the car. Slide the factory bolt through and torque to 70 foot pounds.

Note: Both lower control arms has a bracket welded on the bottom side of the arm. When correctly installed the bracket will be towards the inside of the vehicle.

3. Slide the other end of the arm with the polyurethane and steel sleeve into the rear end. Use the factory bolts and torque to 70 foot pounds. **NOTE:** The bushings are pre-greased.

If you have any questions please feel free to call at:

GLOBAL WEST SUSPENSION COMPONENTS INC. 1-877-470-2975 toll free

This part is a performance product and as such, there is no warranty stated or implied due to the unusual stresses placed upon high performance parts and because we have no control over how they are used.

Global West also produces the following additional products

- Disc brake conversion kits.
- Tubular control arms.
- Tie-rod adjusting sleeves (tubular).
- Springs front and rear.
- Sway bars.
- We also offer Koni shocks and other fine products.
